I am very happy to write a few words about Ms. Shruti Kumbhare, who is my student in the B.Tech Program specialized in Medical Biotechnology (years 2019-2023) at Dr. D. Y. Patil Biotechnology and Bioinformatics Institute. I have taught her two subjects, namely Biochemistry (in the first year of the program) and Metabolic engineering (in this current semester). I have come to know her since the first year of her degree program and witnessed her growth into an intellectually driven and mature student. I distinctly recollect that her presence could be easily perceived by her questions of varied nature related to the topic that I was dealing with in the classroom. Though in the initial days, she appeared to be quiet and hesitant, I have observed that with time she got more involved in discussions and developed a competitive edge, which was soon reflected in her academic performance.

I have realized that she is one of the few students who would stand apart in terms of her comprehension of the subject and the quest for learning new things. She is an active participant in fruitful discussions bringing in knowledge beyond curriculum. She had a pair of skilled hands, was very observant and also meticulous in laboratory work.

Her blended qualities of inquisitiveness, cooperation, punctuality and power to grasp concepts easily along with work ethics and intelligence makes her an ideal candidate for advanced research programs. I certainly believe that she will be a valuable asset to any academic institution and would continue to persevere for the betterment of herself and her organization.

Shruti Kumbhare demonstrated her technical skills during the course B.Tech in Medical Biotechnology. We had many research and technology related conversations and she was always curious to know more about science and its developments. Her keen interest and dedication towards the subject is her greatest strength that would lead her to success in the field.

I would strongly recommend her for the National Centre for Cell Science Dissertation program -2023 and I hope this experience is both helpful and valuable for her as a student. I sincerely wish her all the very best. Please feel free to contact me should you have any questions about Ms. Shruti Kumbhare.
